Potential competing interests: No potential competing interests to declare.

This article highlights the fact that the labor market is undergoing rapid changes, which in turn requires traditional education models to undergo a significant transformation in order to meet the demands of the contemporary world. These changes involve shifting from a narrow emphasis on job-specific skills to encompassing metacognitive competencies, considering a combination of communication, critical thinking, and problem-solving abilities. This approach is highly relevant and should be regarded as the initial step towards comprehending the educational landscape and effecting necessary changes. I am extremely curious about the subsequent steps in this direction.
