Potential competing interests: No potential competing interests to declare.

1- you mentioned prediction of 10 years cardiovascular diseases; but nothing in the dataset is related to 10 years and also there s no mention in the rest of your paper.

2- how did you proceed for feature selection? Which algorithms did you used to select 14 features among 70?

3- could you explicit and clarify preprocessing step?

4-UCI heart disease contains missing values how did you handle this problem?

5- it would be better if you mention the hyperparameters of each algorithm before and after optimization.
