Appendiceal Carcinoid pT4 TNM Finding v7

National Cancer Institute

Source

National Cancer Institute. *Appendiceal Carcinoid pT4 TNM Finding v7*. NCI Thesaurus. Code C89930.

Appendiceal carcinoid with tumor directly invading other adjacent organs or structures, e.g., abdominal wall and skeletal muscle. Penetration of the mesoappendix does not seem to be as important a prognostic factor as the size of the primary tumor and is not separately categorized. (from AJCC 7th Ed.)
