

# Review of: "Classification of Cancer Response to Antiglycolytic Agents: An Approach to Understanding and Predicting Cancer"

Seokhyun Yoon

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The methods and procedures to analyze the data looks logically sound. Other clustering algorithms, for example, graph-based ones, can be used instead of k-means, even if the final results will not be changed that much. It would be worthy of apply similar approach to specific cancer, for example breast cancer, to check if the methods reproduces the BRCA subtypes having different responses to anti-cancer agents.
