**Potential competing interests:** No potential competing interests to declare.

## **Recommended structure of the Abstract:**

Introduction (mandatory). Brief characteristic of topicality and value of the research field (1–2 sentences);

Identification of a gap in scientific knowledge that provides the reason for the study (mandatory). Described as lack (or small amount) of scientific research related with a particular problem.

Statement of the research objective (mandatory). The objective may be replaced by a hypothesis or research questions.

Description of methodology, methods and procedures applied in the paper (mandatory). In empirical articles, data sources and details of their processing are stated. In theoretical papers, it is possible to mention scientific schools or other bases of the developed theory. General scientific methods should not be mentioned.

Main results (mandatory). The results obtained by the author characterizing the achievement of the objective or providing an answer to the formulated hypothesis. The results are presented briefly, very accurately and informatively. Emphasis is placed on the results that are the most significant and attractive for the reader and the scientific community – data of long-term value, important discoveries, conclusions, refuting existing theories, and practical, significant information. The results can be accompanied by recommendations, evaluations, and suggestions.

Evaluation of the contribution of the research to science (optional). It is possible to combine such evaluation with description of the main results
