Potential competing interests: No potential competing interests to declare.

The article begins with a comprehensive overview of the traditional educational framework and its limitations in meeting the dynamic needs of today's students and learners. It cleverly presents the concept of smart learning as a solution that goes beyond the limits of traditional teaching methods. One of the article's strengths is its ability to break down complex ideas into easily digestible parts, making agile learning accessible to educators of all disciplines. The authors emphasize the importance of adaptability, collaboration, and a continuous feedback loop in fostering a responsive learning environment.

Overall, this article is a valuable contribution to the debate on transformative education using agile methods. Its comprehensive literature review, emphasis on essential competencies, and combination of different pedagogical methods make it an interesting read for educators, policy makers, and anyone interested in the future of education.
