The topic is interesting. Since there are many comments on the pure technical contents, I will go beyond that and have the following comments to improve the article quality, presentation, usefulness and more expected citations:

- 1- Please start the abstract with a general sentence to show the global importance of the general topic of the study.
- 2- Add a detailed flowchart for the methodology starting by the state-of-the-art review, identification of research gap, selection of the study area, data collection, .
- 3-It is always better to write the "Discussions" in a separate section, in which, you should clearly explain the significance of the results, implications and limitations of the study and any possibility comparisons with similar studies on similar areas.
- 4- Please add a set of recommendations for future studies, policy planners, decision makers and or stakeholders.
