The article is well-written and comprehensive. There are only a few but pertinent suggestions from my end.

1. The graphical abstract is a bit confusing. It may be redrawn for ease of understanding.
2. The units are not uniform throughout the article. At some places it's grams per liter, at some, g/l. Please correct them to the universally accepted written format.
3. Similarly, the representation of chemical names is missing subscripts and superscripts.
4. Some statements in the article are not able to express the information the authors want the readers to perceive. For example, "Lactic acid is a major industry for biomass-derived chemicals." may be rewritten as "Lactic acid is one of the major end-products of industries utilizing biomass as a resource."
