Carcinogenic Aromatic Amine

National Cancer Institute

Source

National Cancer Institute. *Carcinogenic Aromatic Amine*. NCI Thesaurus. Code C45178.

Potentially cancer-causing compound containing amine with an aromatic ring substituted for one or more of its hydrogen atoms, i.e., -NH₂, -NH- or nitrogen group(s) attached to an aromatic hydrocarbon, whose structure usually contains one or more benzene rings. This group includes many industrial and tobacco carcinogens. (NCI05)
