

# Review of: "Factors Associated with Outcomes of Status Disclosure among Antiretroviral Therapy (ART) Attendees in Public Health Facilities of Mekelle City, Tigray, Ethiopia"

Celso Belo

Potential competing interests: No potential competing interests to declare.

How did you guarantee that the same client was not recruited/included in the study more than once?

What were the main reasons for the non-acceptance of the study by the potential participants?

Figure 1: Please specify what means N1 and N2. Number of recruited clients? I suggest explaining in the figure's legend.

Is there an option to apply the questionnaire using the local language for those not speaking English? If yes, please make it clear when describing the process.

"To minimize errors during data entry, 15% of the collected data was entered and cross-checked." Could you explain how this was split between the health facilities?

I did not find Table 2.

Table 3: How was social support defined (high/low)?

Table 4: I suggest to present the variables in two categories: 1. Process of disclosure of status (act./passiv.) and 2. Outcomes of disclosure (the remaining information presented in the table). Why the positive outcomes are described and the negative (stigma and divorce) are not in the table?

Please improve the presentation of figure 2. For example, percent of what?
