**Potential competing interests:** No potential competing interests to declare.

- The structure of the abstract is not professional. The abstract should be written as: Introduction- research gap/motivation - problem statement - proposed solution/methodology - results and comparisons - conclusions.
- The authors should not use any abbreviation before defining it for the first use. Please check all the papers and make sure all abbreviations are defined at the first appearance.
- The summary of contributions is not provided explicitly. The authors need to provide a subsection to summarize the list of contributions of their current research.
- The future directions of the authors' contribution are not provided. I suggest that the authors state some explicit future recommendations to improve or upgrade their model.
- An important figure for architecture model is the most important diagram with every block of this figure should be elaborated with full information so that the reader can gain full insights into the proposed model.
- The authors need to proofread the paper to avoid any typos. Make sure that all references are cited in order of their appearance.
- Figures of accuracy vs epochs and loss vs epochs are crucial to be added to the results
- Please consider reviewing and citing the following paper:  
<https://ieeexplore.ieee.org/document/9770661>
- A comparison with other state of art models is crucial to discussed
