

Review of: "Does a 'Creativity Crisis' Truly Exist Among Science Learners?"

Jeannette Saidy

Potential competing interests: No potential competing interests to declare.

Thank you for giving me the possibility to read this interesting article.

I have just few suggestions:

- I would suggest to add a clear definition of what type of creativity authors are considering in their research context.
- Recent research on creative persons have drawn on advances in cognitive psychology, cognitive neuroscience and the science of nonlinear dynamics drawing. By identifying the appropriate theoretical background, authors can enhance the predictive power of the research design and justify the selection of the variables.
- when reporting about studies conducting in USA, authors might take in consideration the differences in culture amid western and non-western countries
- By evaluating the responses of the open-ended questions, authors can set directions for future researches about the factors that influence creativity in the classrooms such as teachers' personality differences, classroom climate, school management support...
