The paper written by the following authors: Zsolt Zoltán Fehér, Péter Tamás Nagy, entitled "Probabilistic Assessment of the Heavy Metal Pollution in Debrecen's Topsoil," presents an interesting study on the environmental quality of the Debrecen area in terms of heavy metal pollution.

Although the paper is interesting, I have some major concerns:

## Title

The title reflects the results presented here.

## Introduction

In the introduction, authors should add some overall information in a paragraph/paragraphs dedicated to heavy metal distribution in soil in different countries.

10.54740/ros.2021.006

## Material and Methods

1. Authors should consider adding a photograph of a soil sample.
2. Authors should state the statistical methods applied for results description.

## Results and Discussion

1. Authors should present results as mean value  $\pm$  SD.
2. What is the practical aspect of this research?
