After careful consideration, I regret to inform you that I am unable to recommend this manuscript for publication in Qeios. While this study addresses an important topic and presents some interesting findings, there are several significant concerns that need to be addressed before it can be considered for publication.

1. The literature review is not comprehensive and fails to adequately situate your study within the existing body of literature.
2. The content of the article is insufficient and does not address any significant results or contributions that are worthy of getting published.
3. The last section (Results) lacks depth and fails to adequately interpret the findings in the context of existing research. Please provide a more thorough discussion of your results and their implications for theory and practice.

In the light of the above comments, I suggest that the article is not ready for publication.
