Potential competing interests: No potential competing interests to declare.

This paper proposed an intelligent transportation system to enhance the efficiency, reliability, and user experience of public transportation through real-time bus tracking.

However, similar systems are already widely used. This paper simply introduces the composition and function of the system, and any innovation compared to existing systems is not seen.

Authors should focus on improvement of one related technology or function. More details need to be added, and the superiority of the proposed system should be verified by comparing to existing systems.
