**Potential competing interests:** No potential competing interests to declare.

The overall impression on the technical contribution of the study is marginal, It would be better if authors could address the following recommendations and do the necessary amendments to the manuscript.

- The abstract of the manuscript must be enhanced as the introduction+methodology+results+conclusion.
- The introduction section lacks the motivation of the study. Authors may consider presenting the contributions as bullet points( to be more specific rather than writing them as a paragraph).
- The overall organization of the manuscript must be discussed.
- The limitation of the state-of-art models must be adequately discussed in the introduction section of the manuscript.
- What is the novel aspect in the proposed methodology? Any new methodology is proposed through the current study?
- Where are the objective function of Logistic Regression models discussed?
- what are the metrics considered concerning to the security aspects of the model?
- Where are the details of the dataset and implementation platform discussed?
- where are the hyperparameters discussed in the current study.
- The quality of english must be tremendously improved for better readability of the study.
- what the cases considered as TP, TN, FP, and FN?
