Review of: "Enhanced Channel Estimation for Double RIS-Aided MIMO Systems Using Coupled Tensor Decompositions"

Farid Samsami Khodadad¹

1. Amol University of Special Modern Technologies, Amol, Iran

In this paper, the authors investigated a robust MIMO system with the help of dual RIS (D-RIS) and proposed an interference-free system in contrast. The interference-free system proposed in Section 3 needs further clarification, and the need for the proposed system in the form of a block diagram is clearly added in one of the forms of the paper.

In the introduction to the article, part one of new articles related to the IRS topic should be added to explain the importance of the topic.
