Potential competing interests: No potential competing interests to declare.

The author has provided an interesting review on Cu nanoparticles against viral infections. The review was written well but the author has missed so many points to be included in the manuscript. The author has to include the basic nature of the copper and their metallic nanoparticles from the earlier research publications. The properties such physical, chemical and stability based have to be discussed more in the section 2 for the enrichment of review paper. The interaction between the virus and the copper NPs can be explained in detail. The comparative analysis of the previous available treatment and this CuNPs can be discussed well. The immunological responses with CuNPs on normal skin and the infected skin can be compared with legible discussion. The author needs to revise the manuscript strongly with these validated comments.
