Thank you for providing this intriguing manuscript. It is effectively composed. I have some minor suggestions, which have also been mentioned by other reviewers:

- i) It would be beneficial to include a more comprehensive rationale and justification for conducting the study in the specified location. This should be elaborated upon in the background section, explaining the necessity of carrying out the research in that particular setting.
- ii) I recommend incorporating the data analysis section after the scoring section and addressing ethical considerations. Specifically, it would be valuable to clarify whether the authors or researchers obtained parental consent.
- iii) It would be advisable to include a section on limitations within the discussion portion of the manuscript. This would enhance the ability to interpret and generalize the study's findings more effectively.
