Though the topic seems interesting, there are several issues that remain in the article. The issues are listed below:

1. Firstly, though the study seems a review paper, the content points otherwise. There is only a brief description on what the components of an SDI is.
2. The research recommends some actions to be taken but does not provide how will this be achieved. What are the different policies or departments in Zimbabwe that need to be considered to make the idea of SDI a success.
3. The major issue in this article is that most of the references are outdated and as such don't provide a major backing to the context of the data.
4. Another issue is that authors have used different abbreviations which they have not mentioned on what they entail. Table 1 is the best example for this.
5. The length of the article for a review paper is rather small.
