Myeloid/Lymphoid Neoplasms with PDGFRB Rearrangement

National Cancer Institute

Source

National Cancer Institute. *Myeloid/Lymphoid Neoplasms with PDGFRB Rearrangement*.
NCI Thesaurus. Code C84276.

Myeloid and rarely lymphoid neoplasms characterized by the rearrangement of the PDGFRB gene, most often resulting in the formation of ETV6-PDGFRB fusion transcripts. Patients usually present with chronic myelomonocytic leukemia and less often with atypical chronic myeloid leukemia, or chronic eosinophilic leukemia.
