The commentary, "India's steps towards carbon dioxide monitoring in public assembly spaces ..." by Raja Singh is really an appreciable effort towards, drawing attention in the direction of indoor air quality.

Indoor air quality as one criteria does exist in IGBC, GRIHA and Green building certifications, but needs to be mandated as per bye-laws, as correctly pointed put by the author.

Further, it is required to provided data pertaining to frequency of monitoring, method of monitoring and limits to be followed for CO₂ presence in indoor air.
