

# Review of: "Effects of Sediment Disturbance by the Heart Urchin *Echinocardium Cordatum* on the Sediment–Seawater Solute Exchange: An Exclusion Experiment"

Martina Canessa

Potential competing interests: No potential competing interests to declare.

The experiment proposed by the authors is a good method to test their hypothesis. I really appreciated the approach that, in my opinion, provides new useful information about the bioturbation topic. The manuscript is well-written; the statistical analysis is suitable for the experiment.

Thus, I suggest the publication of the MS.
