Review of "Revitalizing key conditions and integrated watershed management approach to sustain water availability and agriculture in semi-arid regions"

I congratulate the author for choosing a suitable topic to review. I carefully look into that paper and I suggest that the publisher can publish the review article with minor revisions.

The author may indicate the method of review, which will be followed in the part. The collection of literature related to the study may be in recent years. The key points for sustainable watershed management were pointed out but not discussed much in the discussion.

The author may take much more care while presenting references. Suhas et al. (2011) cited in the text and were not found in the list of references.
