HMGA2/LHFP Fusion Gene

National Cancer Institute

Source

National Cancer Institute. *HMGA2/LHFP Fusion Gene*. NCI Thesaurus. Code C99423.

A fusion gene that results from a chromosomal translocation t(12;13)(q13-15;q12) which fuses exons 1-3 of the HMGA2 gene to the 3' portion of the LHFP gene. This rearrangement is associated with lipoma.
