The research topic is interesting, especially in densely populated areas, but I have some notes to increase the value of the research.

The concept of quantitative and qualitative research methods was confused in research, as the quantitative method depends on previous studies and the standards and laws of the subject. Qualitative research depends on the method of observation and recording, then analysis and interpretation of daily life or reality.

- Explaining the topic of CPTED well, as the explanation in the research was distributed between paragraphs, and its five principles were not discussed in detail, their relationships with the topic, and the scientific and logical reason for choosing only two principles.

- Extracting a theoretical framework at the end of the theoretical part that includes a set of concepts, indicators and values and using them in the applied part.

-The research needs to use a systematic and scientific method for application, rely on statistical analysis methods, and move away from the method of description and analysis that is characterized by subjectivity.

-Reconsider writing results and conclusions

The results are what were reached in the applied part and include numbers and percentages specific to the application

Conclusions include what the research generally reached through previous knowledge and the applied part.

my regards
