

Review of: "Spatio-Temporal Analysis of Precipitation Patterns in Xinjiang Using TRMM Data and Spatial Interpolation Methods: A Comparative Study"

Rajdip Saha

Potential competing interests: No potential competing interests to declare.

1. The figure axes/legends should be in English for readability.
2. The introduction needs revision, and other studies related to this issue should be presented in the introduction. Also, mention the differences in your research from previous studies in the region.
3. The methodologies used could have been described more.
3. Locations of measuring stations could be marked on the map.
4. Although results have been shown, they should be discussed more to clarify the reasons for the difference in results, and a proper discussion section would be better for readers.
5. Too few references.
