

Review of: "Skin related health issues among health care workers due to utilizing of personal protective equipment during COVID-19 pandemic in Pakistan"

Kaushik Bhattacharya

Potential competing interests: The author(s) declared that no potential competing interests exist.

I have gone through the manuscript. It is a well done study but will require a revision....

1. Since the sample size is very small, it should be mentioned as a limitation of the study.
2. Please clarify this comment in the Result section - "More than half of the study participants were nurses 94.2%"
3. The author should mention if the quality of PPE is related to skin rashes incidences
4. How was the incidence of skin rashes on the surgeons wearing PPE for long hours in OT in a major surgery ?
5. Is there some prophylactic measures suggested by the authors to decrease the occurrence of skin rashes ?
6. Highlight clearly the importance of the study.
