PDGFD wt Allele

National Cancer Institute

Source

National Cancer Institute. *PDGFD wt Allele*. NCI Thesaurus. Code C124879.

Human PDGFD wild-type allele is located in the vicinity of 11q22.3 and is approximately 257 kb in length. This allele, which encodes platelet-derived growth factor D protein, plays a role in growth factor signaling, embryonic development, cell proliferation, wound healing and angiogenesis.
