Potential competing interests: No potential competing interests to declare.

The author proposes a symmetric key encryption scheme based on Pythagorean and Reciprocal Pythagorean Triples. But some points mentioned below should be taken into consideration:

1. There are lots of English-grammar mistakes. The manuscript should be rewritten carefully. Some sentences repeat several times.
2. Conclusion part is not very explicit. It should be written in more details.
3. The references should be written regularly and in a correct way.
4. The manuscript does not have a significant contribution from the application point of view.

Therefore, my decision about this paper is MAJOR REVISION but I also leave the final decision of the acceptance/rejection to the editor.

Thanks
