Potential competing interests: No potential competing interests to declare.

This manuscript describes a way to analyze the concentration profile and heat capacity in inhomogeneous systems. This is relevant in various fields including the synthesis of polymers, colloidal chemistry, etc. However the article does not give a conclusion and does not provide any calculation or results.

Also a comparison with experimental results should be shown in order to validate the performance of the proposed method.

The language of the article also needs to be revised with correct grammar.
