

# Review of: "Airbase Compatibility with Spatial Planning: A Case Study of Airbase Waterkloof (South Africa)"

Argyros Argyridis

Potential competing interests: No potential competing interests to declare.

This paper deals with various aspects of the Airbase Waterkloof which can be the subject of spatial analysis. It is a very interesting topic, which can have a significant impact in Airbase management, however, there are some drawbacks reducing its impact.

1. The abstract does not provide a comprehensive overview of the research problem, objective, methods, and results.
2. The manuscript is not outlined as a typical scientific paper like below. Thus, it is difficult to identify: how the data were acquired (it seems that a lot of the presented data were found in the literature), what :
  1. Introduction / Literature Review
  2. Materials and Methods
  3. Implementation
  4. Discussion
  5. Conclusions
3. A large part of the manuscript deals with historical references and discussion, which does not seem directly related to the performed analysis.
4. The discussion of results seems to be mixed with their presentation.
5. How the examined factors apply in other similar cases?
