Potential competing interests: No potential competing interests to declare.

The authors are complimented on a well-researched and contemporary article that evinces much interest. While the authors have considered the many pros and cons of widespread integration of AI, and generally struck an optimistic note for the future, the future is unpredictable and has too many interconnected intangibles including gradually declining populations and changing demographics, climate change and ecological disasters, diseases and pandemics, evolving world economy and finances, etc. It would be difficult to make predictive models on the future of AI with great certainty, especially general AI and its far-reaching effects on mankind.
