Potential competing interests: No potential competing interests to declare.

A) This manuscript is very well written, but it can still be improved.

Below are some suggestions for the authors:

1) The sentence "The participants of this study were all Healthcare Professionals in (...) Department of HSAAS.", at the end of the "Study Location" section, is repeated at the beginning of the next section ("Subjects").

I suggest keeping this only in the "Subjects" section.

2) The sentence "Their participation is voluntary, as a convenient sampling method was used." should be placed at "Subjects" section instead of the "Study Instruments" section.

B) Tables

1) Table 1: The percentages for the variable "Years of Working" add up to more than 100%.

I suggest checking the sums of all percentage columns.

2) Table 2 should be mentioned in the text before it is presented.
