**Potential competing interests:** No potential competing interests to declare.

This paper introduced a smart stick for the visual impaired people or the blind. Several technologies of this stick were presented in details, including an ultrasonic sensor, two buzzers, a water sensor, a vibration motor, and so on. In this paper, the author also presented the performance evaluation of the smart stick.

Based on the authors' descriptions of this paper, the proposed idea is appreciated by the visually impaired people or the blind, the realized technologies are practical, and the performances of the smart stick are clearly expressed.

However, the contents about the user test of this stick are missed, and some important references in this research field shall be considered.
