**Potential competing interests:** No potential competing interests to declare.

Although the paper is interesting and discusses a hot topic in computer science, from my point of view, it lacks the formality expected in my field of research. In this sense, formal definitions of each key element should be provided, and a theorem stating the facts discussed in the paper should be defined and proved.

Besides these problems, the proposal is interesting, and the result, if it can be proved in a more formal way, would be of interest to readers, especially given all the areas that are related to it.

Minor:

- Page 2: table 1 → Table 1
- Page 2: don't → do not
