Dear Author,

Greetings!

After reviewing the manuscript, the following comments could be presented:

1. You presented only one hypothesis for your study although this hypothesis has four attributes. Why don't you present four hypotheses to be aligned with those four attributes? I believe presenting four hypotheses for your study will make the study clearer and more flexible in analyzing the results.
2. In tables IV and V, what about the year 2013?
3. The study needs to add recommendations.
4. In the abstract, also you should add the study recommendations.

All the best,
