Potential competing interests: No potential competing interests to declare.

The article at first glance seems to be thoroughly written. Each aspect of efflux pumps has been highlighted. However, the style of writing is informal and, therefore, not scientific up to section 4. A more formal style is adapted thereafter.

Organism names are not written as per scientific convention. All in all, assuming that the target audience is the scientific community, this article reads more as a chapter one might find in a textbook meant for high-school students. The article will benefit from incorporation of scientific examples.
