

Review of: "Relations between e , π and golden ratios"

Dongping Li

Potential competing interests: No potential competing interests to declare.

The author studies the relations between the natural numbers, the ratio of the circumference of a circle to its diameter π and the golden ratios. While this topic is of some interest, the manuscript cannot be published in its present form. The main reason is that the contribution of the manuscript is too small. The main conclusions of the manuscript are taken from [A. Kumar, *Additive Sequences, Sums, Golden Ratios and Determinantal Identities*]. Two relations (19) and (20) derived by the author are essentially special forms of existing conclusions.
