Potential competing interests: No potential competing interests to declare.

1. The article should be checked for grammatical errors.
2. Nomenclature can be given separately. (P, D in Fig 1)
3. In section 2.1, the number of nodes is mentioned as 858963 and 0.8 million. Either one can be used consistently.
4. The terms sinusoidal winglet and solenoidal winglet are used alternately. It is better to mention that both mean the same.
5. Under section 3.4, the figure shows "i/j" whereas the same is mentioned as "j/f" in the explanation. Either one can be used for uniformity.
6. Though the author has mentioned temperature distribution in the abstract, the same is missing in the Results section.
