Potential competing interests: No potential competing interests to declare.

The paper is commendable for its well-defined structure and schematic presentation, which greatly aids in understanding the content. However, I recommend adjusting the paragraph alignment to justify the text uniformly throughout the document. This adjustment will enhance the readability and overall appearance of the paper.

To improve the clarity and comprehensibility of the proposed method, I suggest incorporating additional figures or diagrams. Visual representations can significantly enhance the explanation of complex concepts and methodologies, making it easier for readers to grasp the details of the study.

Furthermore, the paper would benefit from the inclusion of more updated references to strengthen its relevance and reliability. Integrating recent studies and findings related to the topic will demonstrate the author's awareness of current developments in the field and ensure that the paper remains up-to-date.
