Choline Magnesium Trisalicylate

National Cancer Institute

Source

National Cancer Institute. *Choline Magnesium Trisalicylate*. NCI Thesaurus. Code C29244.

A nonsteroidal anti-inflammatory drug (NSAID) belonging to the salicylate family. Choline magnesium trisalicylate inhibits inflammation-related prostaglandin synthesis. This agent's analgesic effect is mediated through peripheral and central pathways, resulting in a decrease in pain perception; its antipyretic effect is mediated via the hypothalamic heat regulation center. (NCI04)
