# Mammary-Type Myofibroblastoma

National Cancer Institute

## Source

National Cancer Institute. *Mammary-Type Myofibroblastoma*. NCI Thesaurus. Code C121181.

A benign mesenchymal neoplasm characterized by the presence of spindle shaped myofibroblasts and mast cells in a collagenous stroma. It is histologically identical to the myofibroblastoma of breast. It usually arises from the subcutaneous tissue and the most common sites of involvement are the inguinal/groin, paratesticular, and vulvovaginal areas.
