This is an interesting article that provide a good general insight into some of the reasons why are there different versions of the COM-B model diagram? But is discussion needs further elaboration as its very brief as of now. Additionally, authors are encouraged to consider using the following perspectives while improving the quality of the paper:

- The theoretical argument of the contingency theory and its role in explaining these variations of models.
- The theoretical arguments of the complementarity (versus substitutive) theory and its role in explaining these variations.
- Time of conducting these studies might need to be considered as a major factor for the variations of models over time.
