Thank you for the invitation to review your manuscript. Here are some initial considerations:

1. Improve the resolution of Figure 7; I believe you should include information on how the plant fibers were obtained. Were they purchased or extracted from a specific location? If extracted, I recommend indicating the geographical location from which they were obtained.
2. I suggest providing an argument explaining why you chose to use a 30% plant-based load in the polymeric composition.
3. In Figure 9, replace commas with periods (captions above the bars), and do the same for Figure 10.
4. I recommend discussing the obtained results more thoroughly and in greater depth.

Congratulations and All the Best!
