

# Review of: "Effect of Yogurt on Fluoride Induced Toxicity in Rabbits"

Rahul Devenderlal Maria

**Potential competing interests:** No potential competing interests to declare.

A sample size of 4 rabbits is too small to get a good statistical data. At least 20 rabbits needed in each group. The title could be changed to "a preliminary study/ A pilot study : ....." and rewritten to suggest a more exhaustive study to be done later.

otherwise the study is good and if in a large sample size the same results are seen ; It would be useful for mankind.

thanks & regards
