Potential competing interests: No potential competing interests to declare.

The paper provides a well-structured exploration of the determinants influencing women entrepreneurs' business performance in Arba Minch Town, Southern Ethiopia. The introduction effectively outlines the study's objectives and hypotheses, while the literature review offers a comprehensive overview, though more recent references could enhance its currency. The research design is explained, but additional details on the rationale behind choosing an explanatory research design and acknowledgment of study limitations would strengthen the methodology section. The results, presented with mean scores and correlation coefficients, are detailed and organized, though visual aids could enhance clarity. The discussion could benefit from deeper exploration of the implications and unexpected findings. Overall, the paper offers valuable insights into factors affecting women entrepreneurs, but improvements in clarity, depth of analysis, and recommendations would enhance its impact.
