Potential competing interests: The author(s) declared that no potential competing interests exist.

Overall, the study is good to explain the use of the SARC-F score for detecting primary sarcopenia. But there are some queries mentioned below:

- 1) Please explain your Methodology section regarding study design and sampling technique.
- 2) Provide some studies in the Discussion section related to your main results which are in consistent with or in contrast to them. Also, provide future recommendations for assessing sarcopenia in polio survivors.
