Citrobacter braakii

National Cancer Institute

Source

National Cancer Institute. *Citrobacter braakii*. NCI Thesaurus. Code C86263.

A species of facultatively anaerobic, gram negative, rod shaped bacteria assigned to the phylum Proteobacteria. This species is motile by peritrichous flagella, dimethyl reductase and arginine dehydrolase positive, indole variable and does not produce acid from salicin or sucrose. *C. braakii* is most commonly found in soil, food, water, and the intestinal tract of humans and animals and is an opportunistic pathogen in immunocompromised patients.
