**Potential competing interests:** No potential competing interests to declare.

In this review, the authors intend to present the state-of-the-art techniques to support the diagnosis of Covid-19. As a review, the article is well-structured, presenting all relevant technologies and a general overview of each one. Therefore, regarding the technical content, I do not have concerns. In order to improve readability, I just want to recommend that the authors rewrite their conclusion section: it is full of typos and unnecessarily long phrases, difficult to understand.
